

CELEBRATE SUCCESS

QUALITY OUTCOMES EVERY DAY

WE ARE PLEASED TO SHARE THE FOLLOWING PATIENT SUCCESS STORY.

Juan Munoz

Reason for Admission: Crush Injury | Workers Compensation Program | Hyperbaric Oxygen Therapy (HBO)
Length of Treatment: Outpatient – 6 Weeks
Result: Healed / Discharged

Juan Munoz woke up and got ready for work like any other day. Once there, he began his normal routine. He climbed up a tall ladder and was putting a horse head on a pumping unit when his right forearm became pinned. Mr. Munoz was able to free himself and was quickly taken to the emergency room for treatment from a crush injury.

After leaving the emergency room, he was referred to PAM Health's Outpatient Wound Care Clinic for treatment of his wound. Upon entering the clinic, Keith at the front desk greeted him with a friendly smile, and staff took him back to the treatment room to begin his healing process. The PAM Health Outpatient Team assessed Mr. Munoz's wound and created his personalized treatment plan. The Outpatient Wound Care Team educated Mr. Munoz on the benefits of Hyperbaric Oxygen Therapy (HBO) and how it can help speed up the wound healing process, as crush injuries are an indicator.

Mr. Munoz began HBO treatment a few weeks after beginning treatment with us. He immediately began to see results, and his wound was getting smaller and smaller each week. After 6 weeks of outpatient treatment, Mr. Munoz was discharged from the Wound Care Clinic because his crush injury wound had healed.

Mr. Munoz is thankful the PAM Health Outpatient Wound Care Team is here in the community and able to treat wounds like his. He stated, "Without the care provided by PAM Health, my wound could have ended up getting worse. I tell everyone I know that the PAM Health Outpatient Wound Care Clinic is the best in Victoria."
