

# CELEBRATE SUCCESS

## QUALITY OUTCOMES EVERYDAY

**WE ARE PLEASED TO SHARE THE FOLLOWING PATIENT SUCCESS STORY.**

### John "Mark" Wilson

**Admitting Diagnosis:** COVID-19 infection with respiratory failure

**Length of Stay:** 9 Days

**Discharge Location:** HOME

Mark admitted to PAM after being diagnosed with COVID-19 and spending 7 days in the ICU. When he arrived he was dependent for all his care. He reported that he was only able to wiggle his fingers and toes. Prior to this diagnosis and ICU stay, he had been working full-time as an event coordinator and was independent for all his activities. Mark progressed extremely well with the PAM team and after only a 9 day stay, was able to return home with his husband, David. He regained the ability to go home at a modified independent level of care with a rolling walker and is looking forward to getting back to normal. Mark will continue his progress with the support of his loving husband and the PAM Outpatient Therapy Clinic. He stated that "The physical, occupational, and speech therapies were awesome and very motivational. They remained positive and taught me how to perform my therapies even when not in a therapy session."

"The team here at PAM knows how to get it done!"
